

GROUNDWATER AT RISK OF PATHOGENS

Drinking Water Officer's Options

PROS	CONS
CHLORINATED water	CHLORINATED water
• Guaranteed to kill all pathogens.	• Some people do not like to taste or shower with chlorinated water.
• There is comfort in knowing no illness could come from the water.	• It may cost about \$35,000 to install and \$3000/yr to maintain
• SSID Operator recommends chlorination	• It is another automated procedure requiring training and specialized maintenance
Water Quality ADVISORY	Water Quality ADVISORY
• Better for people who prefer no chlorine.	• Does not change the risk of one day having pathogens in the water.
	• There will have to be signage in the District, estimated \$1,000
	• People could get sick if pathogens enter the system.
	• Property owners will have to advise visitors and renters of the potential risk of illness.
	• There will always be a concern that the water is not guaranteed safe.
